Contents

1. **Introduction** 1
    - 1.1 Turing's Anticipation of Connectionism 1
    - 1.2 Alan Mathison Turing 4
    - 1.3 Connectionism and Artificial Neural Networks 6
    - 1.4 Historical Context and Related Work 10
    - 1.5 Organization of the Book 13
    - 1.6 Book Web-Site 15

2. **Intelligent Machinery** 17
    - 2.1 Machines 18
        - 2.1.1 Technical Terms 18
        - 2.1.2 Turing Machines 19
        - 2.1.3 Universal Turing Machines 20
        - 2.1.4 Practical Computing Machines 21
        - 2.1.5 P-type Machines 22
    - 2.2 Turing's Unorganized Machines 22
        - 2.2.1 Fundamentals and Definitions 23
        - 2.2.2 A-type Unorganized Machines 26
        - 2.2.3 B-type Unorganized Machines 26
        - 2.2.4 Turing's "Education" of Machinery 28
        - 2.2.5 BI-type Unorganized Machines 29
    - 2.3 Formalization and Analysis of Unorganized Machines 31
        - 2.3.1 Formalization of A-type Networks 32
        - 2.3.2 Formalization of B-type Links 37
        - 2.3.3 Formalization of B-type Networks 41
        - 2.3.4 Formalization of BI-type Links 42
        - 2.3.5 Formalization of BI-type Networks 44
        - 2.3.6 The B-type Pitfall 45
    - 2.4 New Unorganized Machines 48
        - 2.4.1 CP-type Unorganized Machines 48
        - 2.4.2 TB-type Unorganized Machines 50
        - 2.4.3 TBI-type Unorganized Machines 51
        - 2.4.4 BS-type Unorganized Machines 52
        - 2.4.5 BI1-type Link 54

2.5 Simulation of TBI-type Machines with MATLAB 55
    2.5.1 MATLAB 55
    2.5.2 A Simple TBI-type MATLAB Toolbox 55

3. **Synthesis of Logical Functions and Digital Systems with Turing Networks** 63
3.1 Combinational versus Sequential Systems 63
3.2 Synthesis of Logical Functions with A-type Networks 64
3.3 Synthesis of Logical Functions with TB-type Networks 67
3.4 Multiplexer and Demultiplexer 67
3.5 Delay-Unit 70
3.6 Shift-Register 72
3.7 How to Design Complex Systems 74
3.8 Hardware Implementation 77

4. **Organizing Unorganized Machines** 83
4.1 Evolutionary Algorithms 84
4.2 Evolutionary Artificial Neural Networks 86
    4.2.1 Fundamentals 86
    4.2.2 Encoding Techniques 87
    4.2.3 A-type Network Encoding 88
    4.2.4 B-type Network Encoding 90
    4.2.5 Architecture versus Configuration 90
    4.2.6 *L*-System Encoding 93
4.3 Example: Evolve Networks that Regenerate Bitstreams 97
4.4 Signal Processing in Turing Networks 101
4.5 Pattern Classification 106
4.6 Examples: Pattern Classification with Genetic Algorithms ... 109
4.7 A Learning Algorithm for Turing Networks 117

5. **Network Properties and Characteristics** 121
5.1 General Properties 121
5.2 Computational Power 123
5.3 State Machines 125
5.4 Threshold Logic 127
5.5 Dynamical Systems and the State-Space Model 131
5.6 Random Boolean Networks 133
5.7 Attractors 135
5.8 Network Stability and Activity 138
    5.8.1 Activity in A-type Networks 142
    5.8.2 Activity in BS-type Networks 144
    5.8.3 Activities in TB-type and TBI-type Networks 147
5.9 Chaos, Bifurcation, and Self-Organized Criticality 148
5.10 Topological Evolution and Self-Organization 157

5.11 Hypercomputation: Computing Beyond the Turing Limit with Turing's Neural Networks? 163

6. Epilogue 169

Useful Web-Sites 171

List of Figures 173

List of Tables 181

List of Examples, Theorems, Definitions, Propositions, and Corollaries 183
